LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Software R&D Engineer with ~2 years of industry experience building end-to-end data solutions in Python, SQL and Excel, from data cleaning and exploratory analysis to recommendation logic and stakeholder dashboards. Delivered measurable gains in data quality, reporting turnaround and client-retention decisions across 25+ enterprise client accounts. Hands-on with classical ML (Scikit-learn, XGBoost), deep learning for computer vision (CNN, ResNet50, YOLO) and LLM/agentic AI (Model Context Protocol), with five deployed portfolio projects.

TECHNICAL SKILLS

Programming: Python, SQL, C/C++
Machine Learning: Scikit-learn, XGBoost, Logistic Regression, Random Forest, Regression & Classification, Cross-Validation, Hyperparameter Tuning, SMOTE, Model Evaluation (Precision/Recall, ROC-AUC)
Deep Learning & Computer Vision: CNN, Transfer Learning (ResNet50), YOLOv3, OpenCV, Image Classification, Object Detection, TensorFlow/PyTorch
Generative & Agentic AI: LLM integration, Model Context Protocol (MCP), FastMCP, Tool/Function Calling, Prompt Engineering
Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Feature Engineering, Data Cleaning, Time-Series & IoT Sensor Data
Deployment & Tools: Streamlit, FastAPI, MLflow, Model Deployment & Monitoring, Git/GitHub, Jupyter, Excel, Matplotlib, Seaborn

PROFESSIONAL EXPERIENCE

YuviPep Pvt. Ltd. Bengaluru, India
Software R&D Engineer (Data Science & Machine Learning) *Nov 2024 – Present*

- Engineered end-to-end data pipelines using Python (Pandas) and Excel to clean, standardise, and merge user performance data from 25+ enterprise clients, improving data quality and reducing manual preparation effort.
- Performed exploratory and statistical analysis on subject-wise performance to identify each individual's strengths and improvement areas, producing insights that shaped personalised learning plans for 10K+ end users.
- Built a rules-based recommendation engine that maps user interests and performance profiles to suitable courses across a course catalogue.
- Automated client-level performance reports and dashboards using Matplotlib, Seaborn, and Excel, significantly reducing reporting time and supporting data-driven business decisions.
- Analysed IoT device telemetry and sensor data for product R&D, collaborating with hardware, product and business stakeholders to translate findings into actionable product decisions.

PROJECTS

Credit Risk Modelling System | *Python, Scikit-learn, XGBoost, Pandas, Streamlit* | GitHub · Live App

- Built and deployed a classification pipeline on a 100K-record loan dataset, comparing Logistic Regression and XGBoost with feature selection (VIF) and cross-validation to reach 92–94% accuracy.
- Used SMOTE to handle imbalanced data and adjusted the prediction threshold to improve the model's ability to identify loan defaults, achieving around 90% recall.

Healthcare Premium Prediction | *Python, Scikit-learn, Regression, Streamlit* | GitHub · Live App

- Developed an end-to-end regression system predicting annual insurance premiums from demographic and financial features; benchmarked multiple regression models and analyzed extreme prediction errors to improve reliability.

Agentic AI HR Management System | *Python, Model Context Protocol (MCP), FastMCP, LLM tools* | GitHub

- Designed an MCP-compliant server exposing employee, meeting, leave and ticket management plus automated email notifications as standardized tools, enabling AI assistants to execute HR workflows through a modular, extensible architecture.

Car Damage Detection | *Python, Deep Learning, ResNet50, Transfer Learning, Streamlit, FastAPI* | GitHub

- Fine-tuned a ResNet50 model to classify vehicle damage type and location from images, and served predictions through a FastAPI backend and Streamlit interface to automate insurance inspection workflows.

Real-Time Object Detection with YOLO | *Python, YOLOv3, OpenCV, CNN* | GitHub

- Built and optimized a YOLOv3-based computer vision pipeline for real-time object detection, using image preprocessing, CNN-based inference, and Non-Maximum Suppression for accurate object localization.

CERTIFICATIONS

Codebasics: Master Machine Learning for Data Science & AI · SQL for Data Science · Math & Statistics for AI · Python for Data Science

EDUCATION

Rajiv Gandhi University of Knowledge Technologies (RGUKT), RK Valley Kadapa, Andhra Pradesh
B.Tech in Electronics and Communication Engineering | CGPA: 8.86 / 10 *2019 – 2023*
